| Date of the publication | 07.02.2013 |
| Number of the final report | 2167 |
| Safety deficit | <p>On 10 September 2010 a hazardous convergence occurred between a Saab 2000 aircraft on a visual approach to runway 19 at Lugano airport and a Swiss Air Force PC-7 training aircraft. The commercial aircraft had to fly an avoidance maneuver because of the traffic alert and collision avoidance system (TCAS). The analysis of the serious incident and an anonymous survey as part of the investigation suggest that a significant proportion of flight crews have insufficient knowledge of the consequences of the concept of utilization of class D airspace and the way the onboard TCAS safety network functions.</p> |
| Safety recommendation | <p>The Federal Office of Civil Aviation should, in cooperation with the Air Force and relevant aviation associations, develop simple and effective means of updating and enhancing the knowledge of flight crews regarding the use of TCAS and flying in mixed air space.</p> |
